

Air purifiers

A blessing for allergy sufferers

IDEAL

Air purifiers remove allergens from the ambient air and alleviate the symptoms of allergy sufferers.

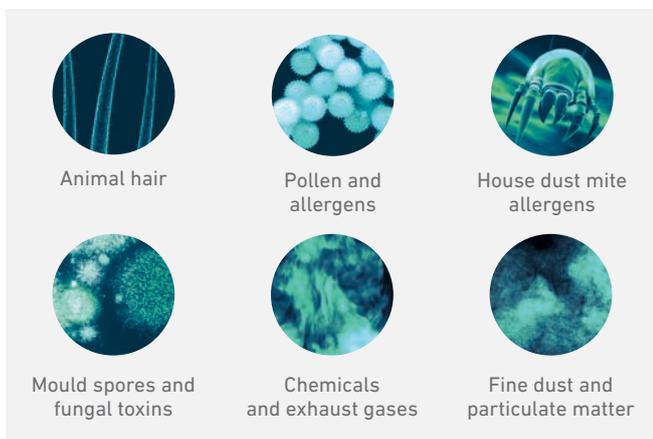

Breathe easily at last.

Turn your rooms into allergy-free zones.

Every day, we come into contact with countless substances. We inhale a significant amount of these into our lungs. Studies have shown, however, that an increasing number of people are suffering from allergies and allergic asthma. But it is possible to reliably remove pathogenic and troublesome air particles.

The problem with allergies

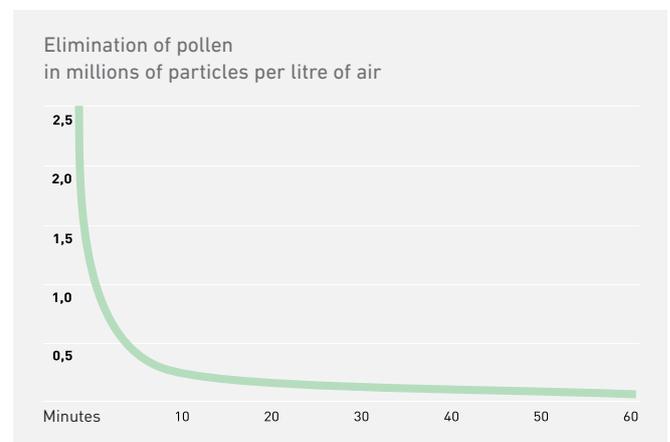

When a person suffers from an allergy, their immune system classifies substances that would not normally harm the body as hazardous and their body attempts to fight them by means of an immunological reaction. An allergy is therefore a specific reaction by the immune system to certain substances from our environment – which are in fact harmless – and these are known as allergens. The immune system reacts to these substances in the same way as a pathogen.

Studies have shown that the number of allergy sufferers is continuously increasing. One fifth of central Europeans are affected. This is a development that needs to be taken seriously. The most common allergies include hay fever, house dust allergies, asthma and various respiratory ailments.

Air purifiers relieve allergy symptoms

It has only recently become more widely known that air hygiene can relieve allergy symptoms. The removal of mildew, house dust and pollen or chemicals makes the air considerably easier to breathe. IDEAL air purifiers make life easier for allergy sufferers.

The immune system can't react if the allergens are removed from the air. An allergic reaction can only be triggered by the allergen itself. The higher the concentration of the allergen, the more serious the reaction.

Clean the air in your rooms

An important aspect of allergy treatment is avoiding contact with the allergens. Until now, it was extremely difficult for allergy sufferers to protect themselves from allergens in the air. IDEAL air purifiers use high-quality filters to minimise inhalation allergens and clean the ambient air.
